Pixel Specification for Active TV

Carols In The Domain 2019 | 21-12-19 | The Domain

TDC Project Manager: Matthew Teale | Prepared by: Matthew Teale

Version: 1

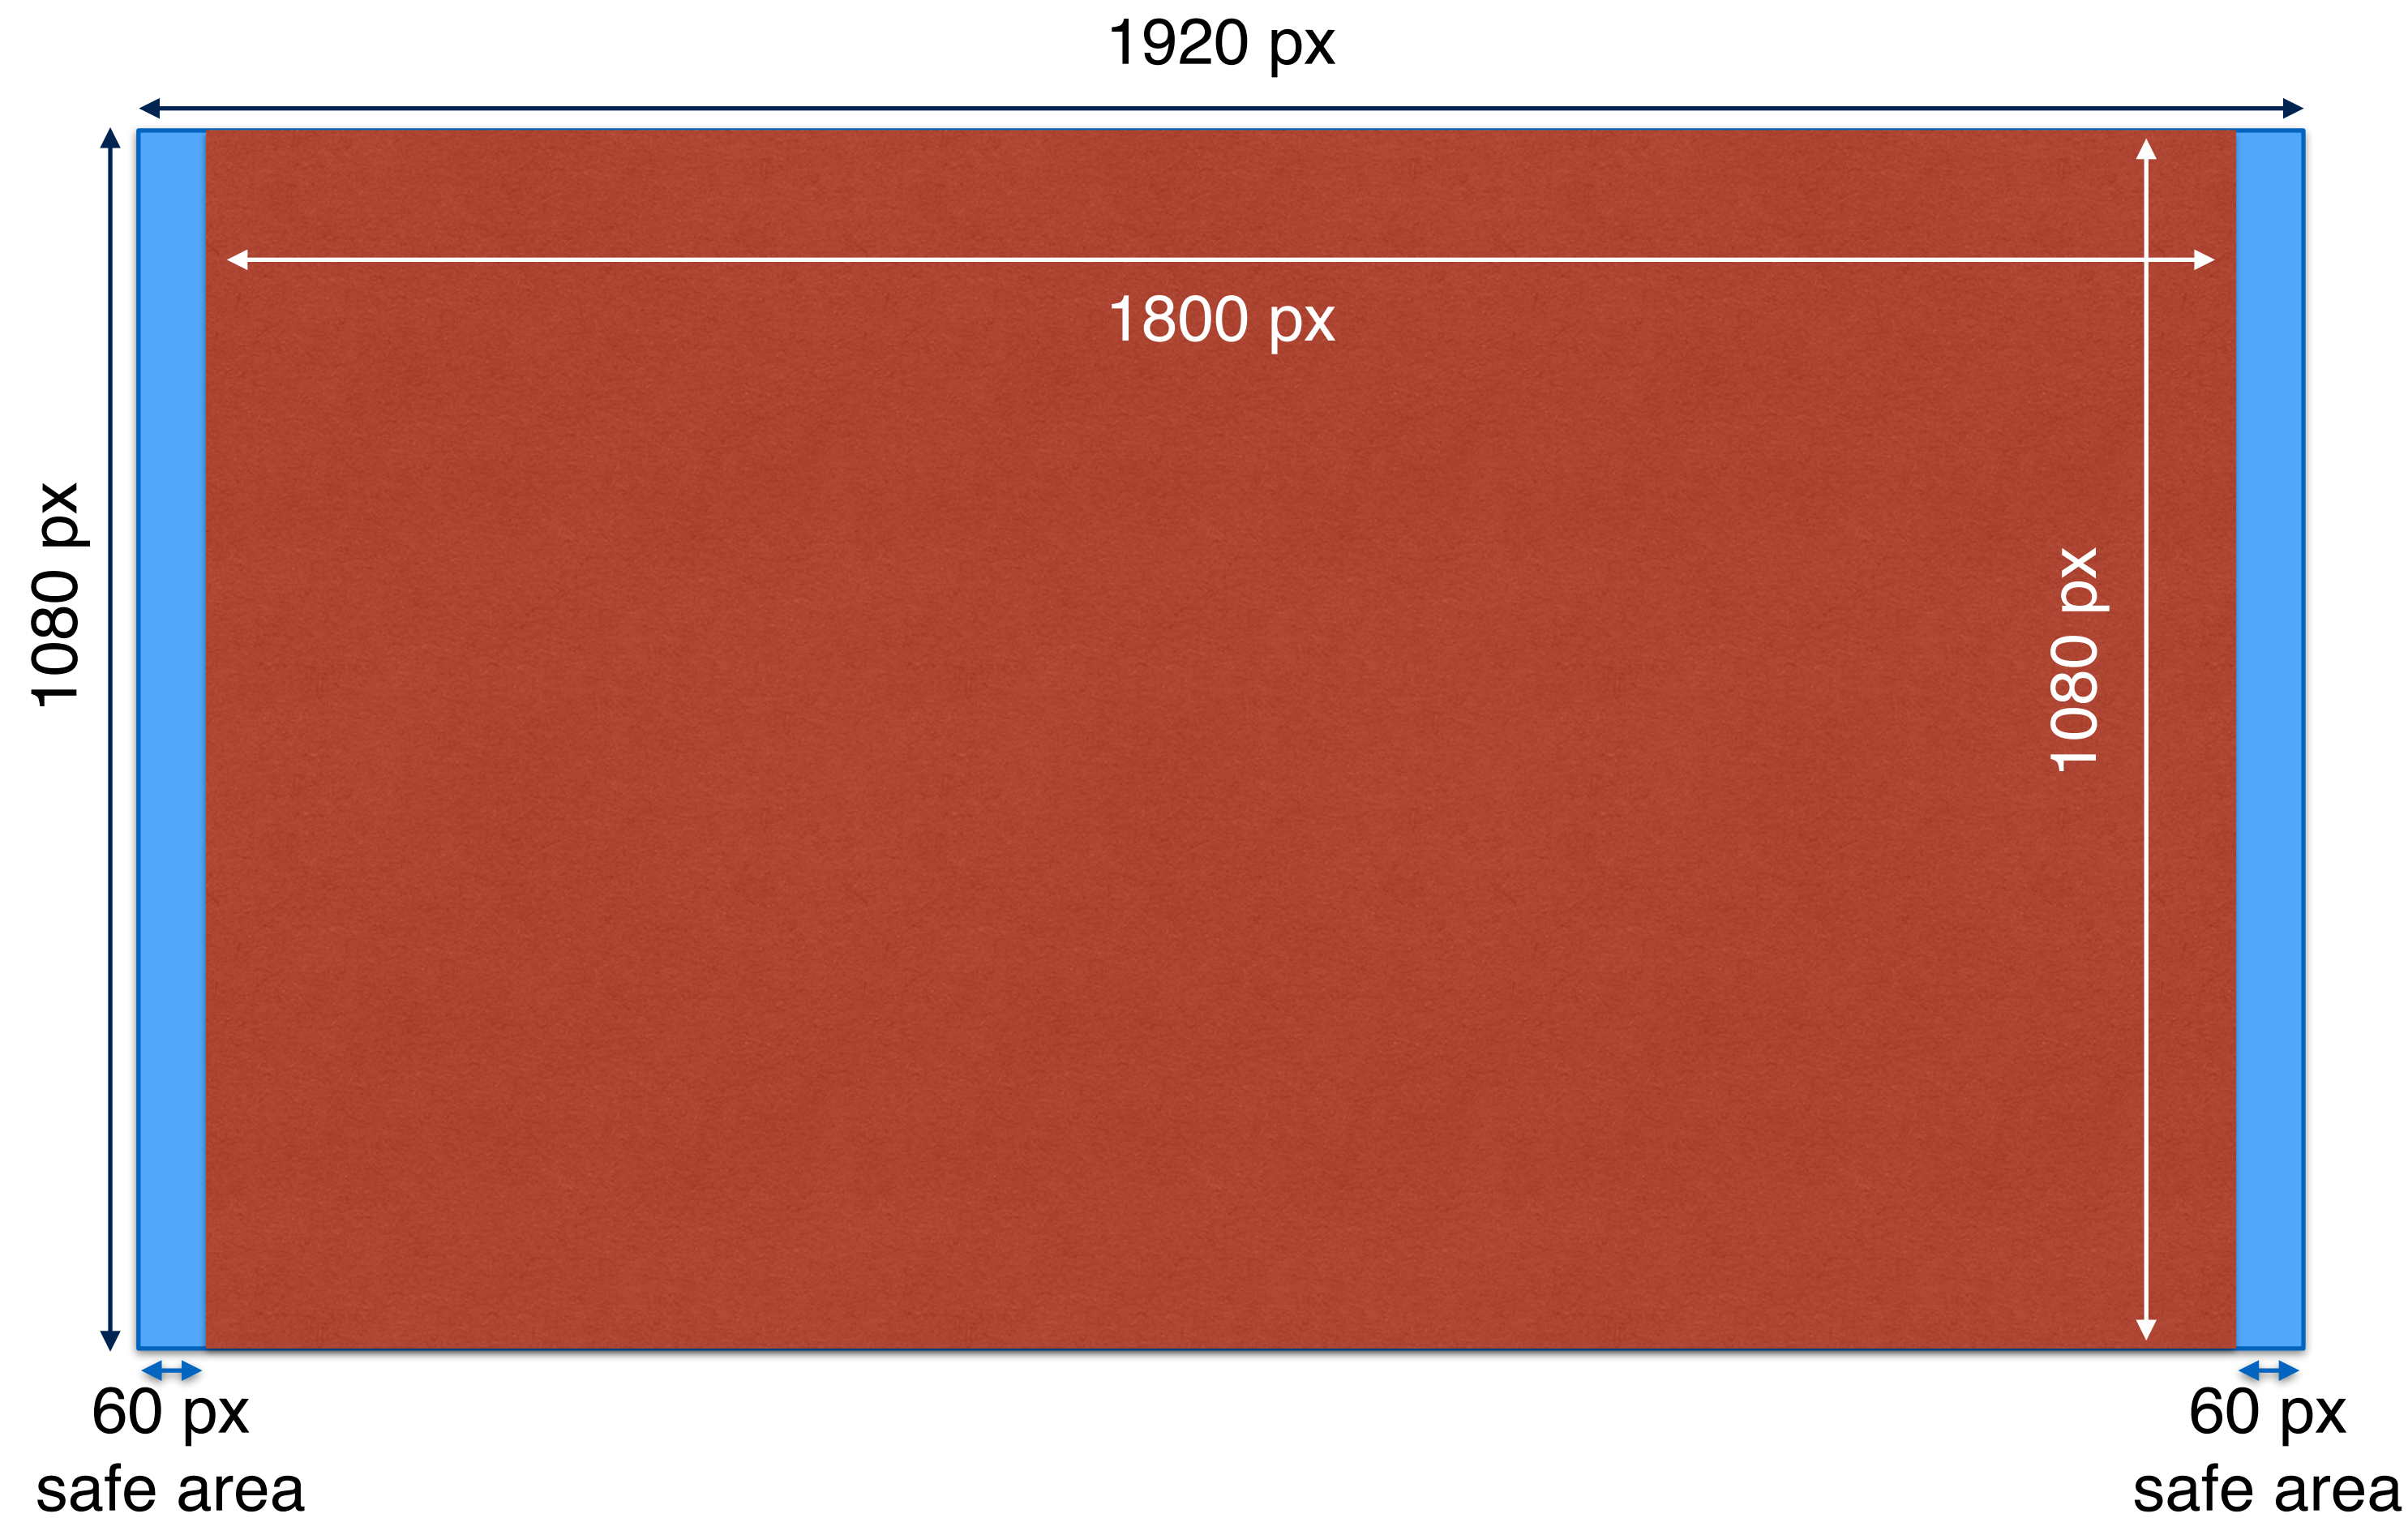

# 3mm Stage Screen

Content created in a 1920 x 1080 raster  
With the actual content to be 600 x 1080  
pixels, top left justified.

As per the codec specs on last page.

# 7mm Delay Screens

## Description

Content Created as 1920 x 1080 pixels, with main content positioned in a 1800 x 1080 pixel safe area.

See next page for Codec and format information

# Content Delivery Specifications

## Playback System: Mitti

All content to be supplied on Mac-formatted hard-drive.

Mitti can play files in any format supported by AVFoundation [the library used by Mitti for video decoding], listed in order of preference, for videos without transparency:

ProRes 422

h.264

HAP

HAP Q

For videos with transparency:

ProRes 4444

HAP Alpha

HAP Q Alpha

Still Images are also supported in the most common formats, but we recommend PNG and JPG. Mitti can also render PDF files.

Audio format: Embedded within video at 44.1khz or 48khz, 16-bit, uncompressed stereo

All initial files to be supplied with “\_v01” at the end of the file name,

All replacement files to be the exact same name with “\_v02” etc. [eg. Opening\_video\_v01 is replaced by Opening\_video\_v02]
